## PROFILE

Backend-focused fullstack developer with 10+ years of commercial experience. I usually take ownership of backend architecture, APIs, integrations, adapter layers, database-heavy features, and gradual legacy rewrites. In some projects that means evolving a live product without breaking delivery; in others it means building the system from scratch around domain logic, admin flows, payments, and external services. In recent work I rebuilt core backend flows, connected 8+ external providers behind one adapter layer, and stepped into React and TypeScript when the product needed frontend support.

## SKILLS

### CORE STACK

PHP Laravel Filament TypeScript JavaScript React MySQL PostgreSQL RESTful APIs Redis Git Docker

### ADJACENT

Go Python Livewire Tailwind CSS GraphQL Apache Kafka Elasticsearch Symfony HTML CSS jQuery Bootstrap Backbone.js WordPress

## GITHUB

The PDF version does not embed the external contribution chart. Current public activity is available in the GitHub profile linked above; private commercial repositories and NDA projects are not reflected there either.

## EXPERIENCE

### Current Product (NDA)

2025 - Present

#### Senior Backend Developer

Product backend role: keeping a legacy commercial platform stable while migrating its core logic to a new engine without disrupting the live product.

- > Rebuilt the core backend engine in about three months while supporting the live legacy branch, removing the architectural limits that had been blocking product growth.
- > Integrated 8+ external providers and 3 billing systems behind one adapter layer with shared retries, stock sync, and provisioning.
- > Profiled heavy API endpoints, database queries, and background jobs; after optimization the service became more stable under peak load.

### Northitgroup

2022 - 2025

#### Middle+ Backend Developer

Outsource environment with multiple teams and stakeholders. Worked at Middle/Middle+ level on backend APIs, database design, tests, bug fixing, and package development.

- > Warehouseplus - Supported a legacy codebase, fixed production issues, extended backend and frontend functionality, then rebuilt a large backend API on a modern Laravel stack. Legacy stack: PHP 7, Symfony 3, MySQL 5, PHPUnit, Swagger, Elasticsearch. Modern stack: PHP 8.3, Laravel 10, MySQL 8, PHPStan, Pint, Pest, Swagger.

- > Yupinion - Built an online research platform for marketing and social surveys with participant rewards, a role-based admin panel, configurable survey flows, answer processing, email notifications, newsletters, and Excel import/export workflows. Stack: PHP 8.1, Laravel 10, Laravel Nova, Laravel Scout, PostgreSQL, Meilisearch, Swagger, PHP Unit.
- > Adandra - Developed a social network focused on matching people by interests, traits, and activities. The platform included chat, matching, favorites, blacklist functionality, caching, and content translation. Stack: PHP 8.2, Laravel 9, PostgreSQL, Elasticsearch, Redis, Swagger, PHP Unit.

Sportdata2020 - 2022

Middle Fullstack Developer

Junior+/Middle role in a team of 5 backend and 5 frontend developers. Worked on backend APIs, database design, frontend features, and production fixes.

- > Worked on gambling-related products including sports betting platforms and online casinos. Integrated gaming providers, payment providers, and contributed to frontend product features. Stack: PHP 7, custom platform, MySQL, React, Backbone.js, Smarty.

Web IT2016 - 2020

Junior+ Fullstack Developer

Career starting point in a small team. Grew from junior contributor to mentoring two junior developers while working on backend APIs, database structure, frontend features, and bug fixing.

- > Contributed to a CMS and API platform for flight booking, hotel reservations, and car rentals. Worked with payment providers and travel aggregators in a functional-style legacy codebase. Stack: PHP 5-7, Smarty, MySQL, jQuery, Bootstrap.

EDUCATION

2010-2015, Bachelor's degree, Brest State Technical University, Faculty of Computers, Systems and Networks, Systems Engineering.
